Protecting brain function in children

The brain is, well, amazing. It has more than a billion cells. It helps us process information, it stores information. It helps us regulate our bodies and simply allows us to exist.

As parents, we want to do everything we can to help our children's brains grow and develop. It is an overwhelming task to say the least.

It is a task we begin tackling before our children are even born. During pregnancy, we are talking to the baby, listening to music and eating the right food for brain development.

Once baby is here, the work really starts. In the first year of a child's life, his or her brain doubles in size. As it grows, parents can find different ways to help develop the brain and strengthen it.

Find ways to introduce language to your child. Talk to him or her — even when they are infants. You may just talk out loud, describing what you are doing. It may feel strange at first but it will have a huge impact on a child's language development.

As your baby grow, respond to their efforts to communicate. It reinforces those developing skills.

Reading is always a great way to introduce language. Most parenting organizations and experts recommend reading to your child daily. And as your child goes from baby to student, the daily reading will be a way to build reading skills. The National Education Association recommends reading daily with your child, especially as you are getting him or her ready for school because it gives you an opportunity to talk about the story.

Developing your child's brain

goes beyond just language skills. At an early age, you will want to think about enriching their sensory experiences. This idea of sensory integration is important for integrating the whole body. Hands-on activities that will help your child explore sounds, touch, smells, movement and vision.

The sensory system helps us organize our bodies and make sense of the world, including using the right amount of pressure when writing or shaking a hand, filtering out distracting sounds, tolerating different textures, coordinating our eyes. The senses help us put on a shoe, brush our teeth, catch a ball and write

Sensory-rich play can help your child make important brain connec-

tions, allowing them to learn how to respond to outside stimuli without it being overwhelming causing them to overreact.

A National Institute of Health article summed up play nicely. Playing is a kid's job. Through play, a child learns to problem solve, gets to make decisions, must cooperate with peers and even learns how to play by themselves.

As we talk about developing our children's brains, we also should consider food and how they could affect brain development.

Eggs, for instance, can help with concentration. Greens like spinach and kale can help brain cells grow and may help with memory issues in adulthood. Fats found in Greek yogurt can help maintain brain cells, ensuring they are sending messages.

Fish like salmon can help protect brain from declining mental skills. Nuts, including nut spreads, have essential fatty acids and can help with mood and help keep the nervous system working. Oatmeal is a good source of fiber and can help keep arteries clear. According to WebMD, children who at oatmeal instead of a sugary cereal performed better on memory-related activities.

And don't forget the fruit. Apples and plum have the antioxidant quercetin that can help fight decline in mental skills.

As we talk about developing the brain and preparing children for school — and life — we need to talk about screen time. Screens are everywhere and it is challenging

to not expose children to iPads, phones, TVs and even games.

So no one really wants to talk about screen time. Screens are everywhere and trying to not engage or expose our children to ipads, phones, TV and games seems overwhelming.

According to Zone'in Workshops, an organization dedicated to sensory processing, children are using four to five times the amount of technology recommended by experts. This attachment to screens is linked to developmental delays, obesity, attention deficit as well as behavioral disorders.

But it is hard to just take away access, especially since it is part of how we communicate and work. It does come down to finding balance. As a parent, you can set limits on screen time, enforce those limits, teach children to prioritize activities over screen time and set an example.

The American Association of Pediatrics has screen-time kit that families can fill out. It can be found at www.healthychildren.org/English/media/Pages/default.aspx#home.

Zone'in Workshop has a chart on their website, www.zoneinworkshops.com, that can help you find the right amount of screen time. Generally, children 0 to 2 should not get screen time. Children 3 to 5 years old can have about one hour a day of TV time. Six to 12 years old can have about two hours a day, while 13 to 18 years old can have about two hours a day and limited time with video games.

Prescription drug abuse

"Oregon has one of the highest rates of prescription opioid misuse in the nation; more drug poisoning deaths involve prescription opioids than any other type of drug, including alcohol, methamphetamines, heroin and cocaine," the Oregon Health Authority states clearly on its website. Three

Oregonians die every week from prescription opioid overdose, it says.

Overdose deaths involving prescription opioids have quadrupled since 1999, and so have sales of these prescription drugs. From 1999 to 2015, more than 183,000 people have died in the U.S. from overdoses related

to prescription opioids. Opioid prescribing continues to fuel the epidemic. Today, nearly half of all U.S. opioid overdose deaths involve a prescription opioid.

Continued on page 5

Talking about drug use is never easy

Why do young people use marijuana? Young people start using marijuana for many reasons. Curiosity, peer pressure, and the desire to fit in with friends are common ones. Those who have already begun to smoke cigarettes or use alcohol — or both — are at increased risk for marijuana use as well. And people who have untreated mental health disorders (such as depression, anxiety, conduct disorder, or ADHD) or who have experienced trauma are at increased risk of using marijuana and other drugs at an early age.

For some, drug use begins as a means of coping with anxiety, anger, depression, boredom, and other unpleasant feelings. But, in fact, being high can be a way of simply avoiding the problems and challenges of growing up. Research also suggests that family members' use of alcohol and drugs plays a strong role in whether a young person starts using drugs. Parents, grandparents, and older siblings are models that children follow. Indeed, all aspects of a teen's environment — home, school, and community — can influence whether he or she will try drugs.

How can I prevent my child from using marijuana? There is no magic bullet for

preventing teen drug use. But research shows parents have a big influence on their teens, even when it doesn't seem that way. Talk openly with your children and stay actively engaged in their lives. To help you get started, the next section provides some key points about marijuana research findings that you can share with your kids to help them sort out fact from myth and help them make the best decisions they can. These key points address the types of questions and comments that we receive from teens every day on our NIDA for Teens website and blog. Following that brief section, the FAQs and additional resources will equip you with even more information.

Did you know that marijuana is addictive? Despite common belief, repeated marijuana use can lead to addiction, which means

that people can have trouble quitting, even if it is having a negative impact on their lives. Research suggests that about 30 percent of people who use marijuana have some level of marijuana use disorder even if they are not yet addicted.

1. People who begin using marijuana before the age of 18 are more likely to develop a marijuana use disorder than adults.

2. Among youth receiving substance use disorder treatment, marijuana accounts for

the largest percentage of admissions — almost 50 percent among those 12 to 17 years old.

Marijuana is unsafe if you're behind the wheel. Marijuana impairs judgment and

many other skills needed for safe driving: alertness, concentration, coordination, and reaction time. Marijuana use makes it difficult to judge distances and react to signals and sounds on the road. Marijuana is the most commonly identified illegal drug in deadly crashes, sometimes in combination with alcohol or other drugs. By itself, marijuana is thought to roughly double a driver's chances of being in a crash, and the combination of marijuana and even small amounts of alcohol is even more dangerous — more so than either substance alone.

Marijuana is linked to school failure, lower income, and poorer quality of life. Marijuana has negative effects on attention, motivation, memory, and learning that can persist after the drug's immediate effects wear off — especially in people who use regularly. Someone who uses marijuana daily may be functioning at a reduced intellectual level most or all of the time. Compared with their nonsmoking peers, students who use marijuana are more likely to drop out of high school. People who use

marijuana regularly for a long time report

decreased overall life satisfaction, including poorer mental and physical health, memory and relationship problems, lower salaries, and less career success.

Marijuana is linked to some mental illnesses. Although scientists don't yet fully understand how the use of marijuana might impact the development of mental illness, high doses can bring on a panic attack or even acute psychosis — thinking that is detached from reality, sometimes including hallucinations. In people who already have the severe mental illness schizophrenia (involving symptoms

disorganized thinking), marijuana use can worsen its symptoms.

Also, evidence suggests that early marijuana use may increase the risk of psychotic disorders among those at higher genetic risk for these disorders.

such as hallucinations, paranoia, and

Bilingual Spanish-speaking Staff & Counselors

"Everyone should be treated like they matter. Many people have so many insecurities that the only way they know how to feel good is to bring others down. If only the parents knew the things their children were saying to others, imagine how different things would be." These are the words of "C", a young person who has experienced bullying and who is ready to make change happen.

October is National Bullying Prevention Month, a campaign founded by PACER, a Minnesota-based parents' organization. "The culture of bullying won't end until people across the country take action and show children and teens that they care," says Julie Hertzog, director of PACER's National Bullying Prevention Center. "This is a very real and painful issue that kids are facing, but they don't have

to face it alone. Bullying can be prevented if we all work together to change the culture."

What if bullying is a part of your or your child's life? Bullying can destroy a child's self-esteem and make school and social activities anxiety-filled daily events, no matter what age they are. Although children and teens with disabilities or who of a visible minority are common targets, bullies choose their

victims with little rhyme or reason. PACER recommends responding to the bullying of your child by working with him or her to protect themselves and record incidents, working with the child's teacher to recruit support and to get the problem in hand, and, if need be, working with the school district administration to bring the gravity of the problem to

In 2015, more than 15,000 people died from overdoses involving prescription opioids. (Centers for Disease Control and Prevention.)

The most common drugs involved in prescription opioid overdose deaths include: Methadone, Oxycodone (such as OxyContin®,

Percocet), and Hydrocodone (such as Vicodin®). Other types of opioids often prescribed are Oxymorphone (such as Opana), Morphine, Codeine and Fentanyl. Among those who died from prescription opioid overdose between 1999 and 2014: Overdose rates were highest among people aged 25 to 54 years. Overdose rates were higher among non-Hispanic whites and American Indian or Alaskan

Natives, compared to non-Hispanic blacks and Hispanics. Men were more likely to die from overdose, but the mortality gap between men and women is closing.

There is also risk of misuse, abuse and opioid use disorder (addiction) that are potential dangers. In 2014, almost 2 million Americans abused or were dependent on prescription opioids. As many as 1 in 4 people who receive

prescription opioids long term for non-cancer pain in primary care settings struggles with addiction. Every day, over 1,000 people are treated in emergency departments for misusing opioids.

Every day, over 300 children in the United

States ages 0 to 19 are treated in an emergency department, and two children die, as a result of being poisoned. It's not just chemicals in your home marked with clear warning labels that can be dangerous to children.

Everyday items in your home, such as household cleaners and medicines, can be poisonous to children as well. Medication dosing mistakes and unsupervised ingestions are common

ways that children are poisoned. Active, curious children will often investigate—and sometimes try to eat or drink—anything that they can get into.

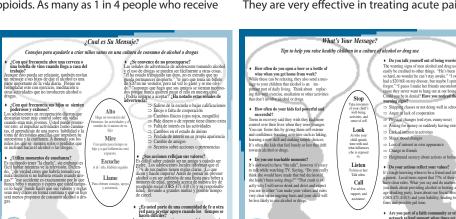

Thankfully, there are ways you can help poison-proof your home and protect the children

Opioid medications are very powerful. They are very effective in treating acute pain, managing cancer pain, and managing end of life pain care. However, in Oregon and across the nation, there has been a dramatic increase in overdose deaths and hospitalizations due to prescription opioid pain medications. Long term use of opioids has some very serious side effects and is not as helpful as many other treatments. Unused opioid medications in the home may be misused. Taking too much opioid pain medication at once can stop a person's breathing and lead to death. Taking opioids together with alcohol or other sedatives increases this risk.

If your doctor prescribes you opioid pain medication, talk to your doctor about the benefits, risks and limitations of prescription pain medications, and other options to manage your pain. Be sure to tell your doctor about other medications you are taking. Let your doctor know if you have a history of

substance use disorder or a mental health disorder. Use the smallest amount of medication for the fewest number of days. Do not drive or operate machinery while taking opioids for pain. Store prescription pain medications in a SAFE, SECURE place, out of reach of others. Be aware of how much medication you have, and monitor the quantity. Use prescription pain medications only as instructed by your doctor. To help prevent misuse, do not sell or share your medication. Never use another person's prescription pain medication. Make a plan with your doctor for when and how to stop, if a choice is made to use prescription pain medications. Make sure any unused medication is properly disposed of once it is no longer needed.

Creating a community without violence

Creating a community without violence starts with how we teach children consent and empathy for others. These messages can be practiced with children from birth, and impact children's development and relationships with others. Here are some examples of messages to kids by age group.

For Children Ages 1-5

Teach children to ask permission before touching or embracing a playmate. Use language such as, "Sarah, let's ask Joe if he would like to hug bye-bye." If Joe says "no" to this request, cheerfully tell your child, "That's ok, Sarah! Let's wave bye-bye to Joe and blow him a kiss!"

Help create empathy within your child by explaining how something they have done may have hurt someone. Use language like, "I know you wanted that toy, but when you hit Mikey, it hurt him and he felt very sad. And we don't want Mikey to feel sad because we hurt him."

Teach kids to help others who may be in trouble. Talk to kids about helping other children, and alerting trusted grown-ups when others need help. Ask your child to watch interactions and notice what is happening. Use the family pet as an example, "Oh, it looks like the kitty's tail is stuck! We have to help her!" Praise your child for assisting others who need help, but remind them that if a grown-up needs help with anything, that it is another? grown-up's job to help. Praise your child for alerting you to people who are in distress, so that the appropriate help can be provided.

Teach your kids that "no" and "stop" are important words and should be honored. Also teach your child that their "no's" are to be honored. Explain that just like we always stop doing something when someone says "no", that our friends need to always stop when we say "no" too.

Encourage children to read facial expressions and other body language: Scared, happy, sad, frustrated, angry, and more. Charade-style guessing games with expressions are a great way to teach children how to read body language.

Never force a child to hug, touch or kiss anybody, for any reason. If Grandma is demanding a kiss, and your child is resistant, offer alternatives by saying something like, "Would you rather give Grandma a high-five or blow her a kiss, maybe?" You can always

explain to Grandma later what you're doing and why.

Model consent by asking for permission to help wash your child's body. Keep it upbeat and always honor the child's request to not be touched. "Can I wash your back now? How about your feet? How about your bottom?" If the child says "no" then hand them the washcloth and say, "Cool! Your booty needs a wash. Go for it!"

Give children the opportunity to say yes or no in everyday choices too. Let them choose clothing and have a say in what they wear, what they play, or how they do their hair. Obviously there are times when you have to step in (when your child wants to wear a sundress in the dead of winter would be one of those times!), but help them understand that you heard their voice and that it mattered to you, but that you want to keep them safe and healthy.

Allow children to talk about their body in any way they want, without shame. Teach them correct words for their genitals, and make yourself a safe place for talking about bodies and sex. Say, "I'm so glad you asked me that!" If you don't know how to answer their questions the right way just then, say, "I'm glad you're asking me about this, but I want to look into it. Can we talk about it after dinner?" And make sure you follow-up with them when you say you will.

Talk about "gut feelings" or instincts. Sometimes things make us feel weird, or scared, or yucky and we don't know why. Ask your child if that has ever happened with them and listen quietly as they explain. Teach them that this "belly voice" is sometimes correct, and that if they ever have a gut feeling that is confusing, they can always come to you for help in sorting through their feelings and making decisions.

"Use your words." Don't answer and respond to temper tantrums. Ask your child to use words, even just simple words, to tell you what's going on.

For Children Ages 5-12

Teach kids that the way their bodies are changing is great, but can sometimes be confusing. The way you talk about these changes — whether it is loose teeth or pimples and pubic hair — will show your willingness to talk about other sensitive subjects.

Encourage them to talk about what feels good and what doesn't. Do you like to be tickled? Do you like to be dizzy? What else? What doesn't feel good? Being sick, maybe? Or when another kid hurts you? Leave space for your child to talk about anything else that comes to mind.

Remind your child that everything they're going through is natural, growing up happens to all of us.

Teach kids how to use safewords during play, and help them negotiate a safeword to use with their friends. At this age, saying "no" may be part of the play, so they need to have one word that will stop all activity. Maybe it's a silly one like "Peanut Butter" or a serious

one like, "I really mean it!" Whatever works for all of them is good.

Teach kids to stop their play every once in a while to check in with one another. Teach them to take a time out every so often, to make sure everyone's feeling okay.

Encourage kids to watch each other's facial expressions during play to be sure everyone's happy and on the same page.

Help kids interpret what they see on the playground and with friends. Ask what they could do or could have done differently to help. Give them big props for talking to you about tough subjects.

Don't tease kids for their boy-girl friendships, or for having crushes. Whatever they feel is okay. If their friendship with someone else seems like a crush, don't mention it. You can ask them open-ended questions like, "How is your friendship with Sarah going?" and be prepared to talk — or not talk —

Teach children that their behaviors affect others. Ask them to observe how people respond when other people make noise or litter. Ask them what they think will happen as a result. Will someone else have to clean up the litter? Will someone be scared? Explain to kids how the choices they make affect others and talk about when are good times to be loud, and what are good spaces to be messy.

Teach kids to look for opportunities to help. Can they pick up the litter? Can they be more quiet so as not to interrupt someone's reading on the bus? Can they offer to help carry something or hold a door open? All of this teaches kids that they have a role to play in helping ease both proverbial and literal loads.

For Teens and Young Adults

Education about "good touch/bad touch" remains crucial, particularly in middle school. This is an age where various "touch games" emerge: butt-slapping, snapping bra straps, boys hitting one another in the genitals, and pinching each other's nipples to cause pain. When kids talk about these games, a trend emerges where boys explain that they think the girls like it, but the girls explain that they do not. We must get kids talking about the ways in which these games impact other people.

Build teens' self-esteem. In middle school, bullying shifts to specifically target identity, and self-esteem starts to plummet around age 13. By age 17, 78% or girls report hating their bodies. Remark to them regularly about their talents, their skills, their kindness, as well as their appearance. Even if they shrug you off with a, "Dad I know!" It's always good to hear the things that make you great.

Continue having "relationship talks" with middle schoolers, but start incorporating information about consent. Ask questions like, "How do you know whether your partner is ready to kiss you?" and "How do you think you can tell if someone is interested in you?" This is a great time to explain enthusiastic consent. About asking permission to kiss or

touch a partner. Explain only "yes" means "yes". Don't wait for your partner to say "no" to look for consent.

Nip "locker room talk" in the bud. Middle school is the age where sex-talk begins in gender-segregated environments, like locker rooms and sleep overs. Crushes and desire are normal and healthy, but we need to model how to talk about our crushes as whole people. If you overhear a kid say, "She's a hot piece of a**!" You could say, "Hey, I think she's more than just an a**!" You can keep it jokey, they'll roll their eyes at you, but it sinks in.

It's common, and perfectly okay, to be overwhelmed or confused by new hormonal feelings. Tell your kids that no matter what they're feeling, they can talk to you about it. But their feelings, desires and needs are no one's responsibility but their own. They still need to practice kindness and respect for everyone around them.

Mentor teenage and college-aged boys and young men about what masculinity is. Ask what hasn't been so good about our culture of masculinity in the past. How can we build a more inclusive form of masculinity that embraces all identities and types of guys and men: from jocks to theater folks to everyday you-and-me? These conversations can encourage a non-violent form of masculinity for the future.

Talk honestly with kids about partying. Make it clear that you don't want them drinking or using drugs, but that you know kids party and you want your kids to be informed. Ask them questions about how they are going to keep themselves and others safe. Be careful about the language you use with your kids about partying. The responsibility is never on the victim to have prevented his or her assault. It is always on the perpetrator to make the right decision and not harm anyone.

Keep talking about sexuality and consent with teens as they start having serious relationships. Yeah, they'll tell you they know it all, but continuing the conversation about healthy consent, respecting our partners and healthy sexuality shows them how important these themes and your family values are to you. It also normalizes talking about consent, so talking openly and respectfully with partners becomes second nature to teens.

Teens are curious and eager to have more information about sexual assault, consent, and healthy sexuality. They want to learn, and they will find a way to get information about sex. If you are the one providing that information — lovingly, honestly, and consistently — they will carry that information and the values you want to provide out into the world with them. Having good information encourages kids to be UPstanders, not bystanders. Not only does the world need more UPstanders, but kids really want to be a force for good. And we can give them the tools to do so.

Keep me safe

with these \subseteq simple tips

- 1. Rule #1: Keep household chemicals stored UP and safely away from babies.
- 2. Read the label: Avoid products with the words "poison" or "danger". Buy the least toxic product that will do the job.
- 3. Buy chemical products only when necessary. There are many non-toxic cleaners you can make yourself. Go to "Create a Healthy Home" section on our website for recipes.

4. Skip aerosol sprays. Aerosols may cause air pollution. Instead, choose solid or gel products, or pump sprays.

5. Drop off any unwanted chemicals at our regular hazardous waste collection events. Go to www.tricountyrecycle.com for our schedule and what we accept.

tricountyrecycle.com **541-506-2636**

A disturbing trend among young people

Are you aware of a hot new trend with young people?

It is time to go back to school, and as a parent or guardian you might be focused on school supplies, the bus schedule, or how to handle lunches. You may think the hot new trends just apply to clothes, shoes or backpacks. Likely you are not even thinking about your youth being exposed to e-cigarettes, also known as vaping.

E-cigarette use among youth has gone up dramatically in the past few years across the nation, and Hood River is not exempt from this trend. E-cigarettes can be addictive, can harm brain development, and can lead to other risky behavior.

E-cigarettes come in small devices that are easily disguised. Some look like thumb drives, and plug into a computer to charge. Most of the fluids used in these devices contain either nicotine or marijuana.

Most kids do not smoke or vape. So, it is important to let your child know: not everyone is trying it, it is dangerous, and you do not want them to try it. Kids hear adults, even if they pretend to not to be listening.

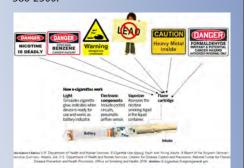

For a great resource on e-cigarettes go to: e-cigarettes.surgeongeneral.gov.

To get information in Spanish click on the resources tab.

On this website you will get the facts, learn about the risks, get suggestions on how to take action, get a parent tip sheet about how to talk to your youth and find out more about e-cigarettes.

Protect your young people by talking to them about the hazards of e-cigarettes and vaping.

For more information contact the Hood River County Prevention Department at 541-386-2500

The HAVEN Prevention Program's strategic direction is to develop comprehensive prevention strategies that effectively address teen dating and sexual violence, of which we know are preventable. Ultimately, our goal is to create a community where youth can thrive. HAVEN will continue to develop program strategies and partnerships to advance this important work and evaluate our effectiveness.

For more information, call Tara Koch, Executive Director 541-980-8222

Alexis Crawford PREVENTION EDUCATOR

Cannot be combined with insurance. Some restrictions apply

Alexis has a B.A. in Psychology from Lee University and will complete her Masters in Theology from Fuller Theological Seminary December of 2018. Her work with youth consists of the Youth Community in Action Program in Tennessee, and Penns Valley Youth Center in Pennsylvania. She has tutored students in various academic subjects, as well as mentored at-risk middle school students in social conflict resolution. Her background also includes crisis counseling, research and community outreach. In her free time, she likes to watch college football, listen to radio drama podcasts, visit museums, and explore the great outdoors with her husband.

Cassandra Ambrosini

PREVENTION EDUCATOR

Cassandra has an Associate's degree in Early Childhood Ed from PCC. She has spent the last 17 years working with children and their families in Wasco County. Additionally, she has worked with the foster care system, Head Start, and the local school systems. She is the proud mother of 5 kids that she has raised in our local area. Her hobbies include riding her motorcycle, kayaking, camping and exploring the beautiful Pacific Northwest.

Makenna Jordan

PREVENTION EDUCATOR

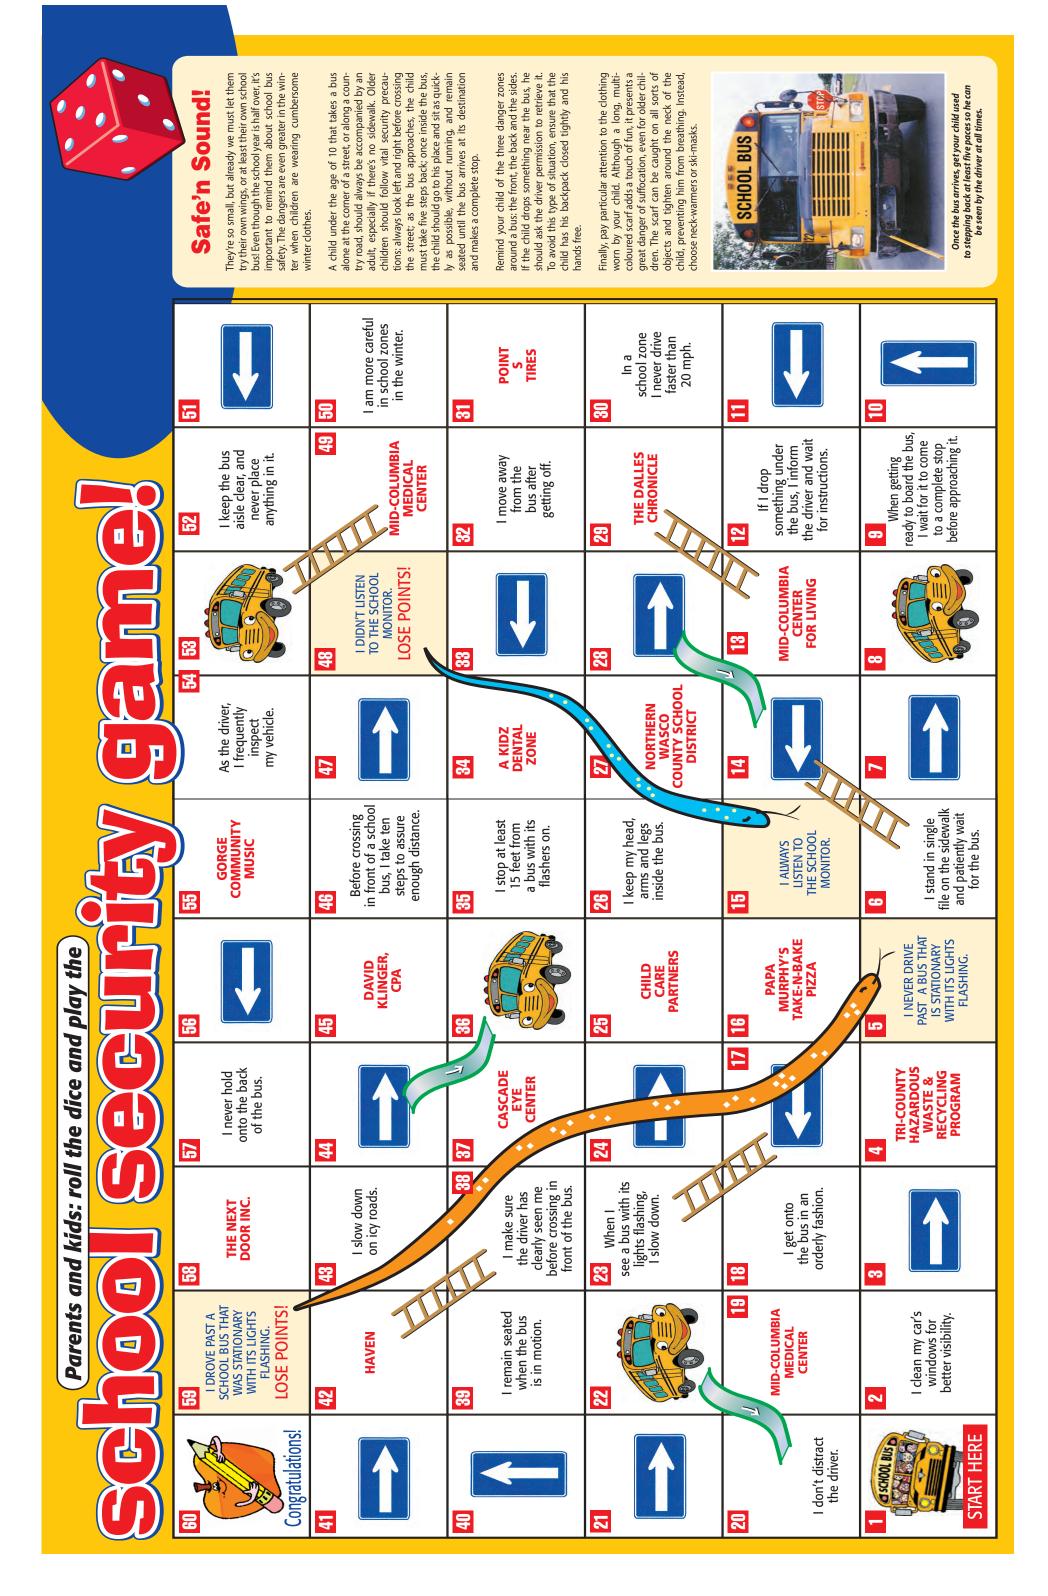

Makenna is thrilled to be joining the HAVEN team as a Prevention Educator! Since graduating from Gonzaga University with a B.A. in Environmental Studies and Philosophy, Makenna has worked as an AmeriCorps Volunteer with students throughout the Northwest – most recently as an Ecology Educator with School Districts in The Dalles and Hood River. Her work is motivated by a passion for equitable education opportunities, youth empowerment, and the creative exploration of intersectionality. In her free time Makenna enjoys rock climbing, volunteering in her community, anime, combining art and nature, and existential conversations.

Paigh Denmark PREVENTION EDUCATOR

Paigh started her career with HAVEN as an Intern early in 2018 and soon after was hired as a Prevention Educator. Paigh grew up in Washington and is currently attending Linfield College where she will receive her B.A. in Sociology with a minor in Gender Studies, December 2018. While she finishes her degree, she will be splitting her time between HAVEN and her college. Paigh is passionate about teaching the aspects of healthy relationships, the importance of consent, and advocating for the rights and equality of all marginalized people. In her free time, Paigh loves to find a body of water to swim in, eat berries, or cuddle her cat; Kashi.

HIGH QUALITY MEDICAL CARE

MCMC Pediatrics

For infants, young children & teens

Nothing is more precious than the health of your child. That's why at MCMC Pediatrics, our team of board-certified pediatric providers are specially trained in the care of infants, children and teens. Whether you need a physical exam or same-day appointment, we strive to provide the highest quality care.

Our pediatric team includes three pediatric primary care practitioners and two pediatric nurses who work hard to create an environment where every child feels cared for and safe. Our primary care practitioners also work closely with specialists at MCMC and larger healthcare systems so your child gets the best possible care.

We work in partnership with parents. If you're more comfortable speaking a language other than English, interpreters are available by phone for most languages. Spanish speaking interpreters are available in-person.

Now accepting new patients.

Call 541.506.6520 for an appointment.
